STATE OF NEW YORK.

No. 5.

IN ASSEMBLY,

January 2, 1861.

ANNUAL REPORT

Of the Commissioners of the Canal Fund, with the Annual
Report of Auditor of the Canal Department.

STATE OF NEW YORK:

CANAL DEPARTMENT, }
ALBANY, January 2, 1861. }

To the Speaker of the Assembly:

SIR—Allow me, through you, to transmit to the Legislature the accompanying annual reports of the Commissioners of the Canal Fund, and of the Auditor of the Canal Department.

Respectfully yours,

N. S. BENTON, *Auditor.*

REPORT OF THE COMMISSIONERS OF THE CANAL FUND.

STATE OF NEW YORK:
CANAL DEPARTMENT, }
ALBANY, December 31st, 1860. }

To the Legislature:

The following report of the Auditor of the Canal Department having been submitted to the Commissioners of the Canal Fund, they respectfully present the same as the statement required by law, of the condition of the canal funds, and commend to the consideration of the Legislature, the views and recommendations therein contained.

ROBERT DENNISTON, *Comptroller*.
P. DORSHEIMER, *Treasurer*.
CHAS. G. MYERS, *Attorney General*.

REPORT OF THE AUDITOR.

STATE OF NEW YORK:

CANAL DEPARTMENT,
ALBANY, December 1, 1860. }

To the Commissioners of the Canal Fund:

The Auditor, in compliance with section 14 of the act chapter 162, Laws of 1848, herewith submits the

ANNUAL STATEMENTS

of the receipts and payments on account of the canals and the canal debt, the balance of the funds on hand, the disposition of the same, and the condition thereof, at the close of the fiscal year ending September 30, 1860.

Document No. 1 is a recapitulatory statement of the several succeeding exhibits, numbered to 65, inclusive, and contain the annual statements required to be reported to the Legislature at the commencement of each session, showing the general condition of the several funds appropriated by law to the payment of the interest and principal of the canal debt, and of the several funds appropriated and belonging to the several canals of the State.

A review of these statements, by the Auditor, has been sanctioned by long usage, if not required of him by the statute creating the office, and he therefore, on this occasion, designs to offer such suggestions as seems to him appropriate and called for, as well in regard to the condition of the funds as with a view to the improvement of our canal revenues.

By document No. 1 it appears that, on the 30th September, 1859,
there was in the Treasury and invested, belonging to the Canal
Fund. the sum of \$1,403,166 34
Received during the fiscal year ending on the 30th
September, 1860, 7,947,166 15

Carried forward \$

Brought forward	\$
Total receipts and available and unavailable balances,	\$9,350,332 49
The payments during the year, as shown by the tables herewith submitted, have been	6,975,314 73
Leaving a balance on the 30th of September, 1860, of	<u>\$2,375,017 76</u>

Of the above balance there was on deposit in banks, to the credit
of the Treasurer of the State, on account of the Canal Fund,
the sum of

\$2,266,385 05

In the custody of the Auditor, securities invested
on account of the Canal Fund, viz:

Bank fund stock,	\$73,079 15	
Canal stocks	10,050 00	
Real estate securities, Walter Joy's bank	20,354 06	
Real estate, &c., Bank of Corning,	5,149 50	
		<u>108,632 71</u>
		\$2,375,017 76
Appropriations overdrawn (see tables 40, 44 and 54),		102,747 11
		<u>\$2,477,764 87</u>

Of the above amount there belongs to the Sinking Fund for the
redemption of the canal debt,

\$1,595,103 00

Sinking Fund for the payment of interest on, and
principal of, the debt for the enlargement and
completion of the canals,

257,191 59

Sinking Fund for the payment of interest on the
floating debt loan,

75,000 00

Investment of premiums on loans,

69,317 12

Fund for the completion of the canals,

149,624 69

Fund for payment of floating debt,

5,802 05

Fund for temporary loans,

4,676 32

Advances of tax of 1860

129,530 09

Erie canal enlargement,

93,623 74

Oswego canal,

53,089 40

Carried forward

\$

Brought forward.....	\$	
Crooked Lake canal.....		415 15
Chenango canal,.....		1,717 00
Black River canal and improvement,.....		42,674 72
		\$2,477,764 87

REVENUES AND EXPENDITURES FOR THE FISCAL YEAR.

The following statement, being a condensed abstract of Table No. 40, shows the actual *revenues* of the canals, from all sources, annual in their nature, during the fiscal year. The expenditures for the same period, on all the canals, for charges caused by, or growing out of them, with the expenses of collection, superintendence, and *ordinary* repairs, are also briefly stated. The condition and resources of the State, relative to the canals are shown by this exhibit:

Receipts during the year:

From tolls collected on all the canals	\$2,379,534 04
From rent of surplus waters.....	1,767 24
From interest on current canal revenues, &c.	35,287 11
	\$2,416,588 39

Payments during the year:

To superintendents, for repairs....	\$149,158 22
To contractors, for repairs.....	229,127 67
To Canal Commissioners, for repairs	231,753 23
To collectors, for salaries, clerk hire, pay of inspectors, and expenses of collectors' offices.....	87,021 37
To weigh-masters.....	9,867 67
For salary of Auditor, and clerk hire in Canal Department, salary and extra clerk hire of State En- gineer, refunding tolls, printing, and miscellaneous payments....	40,048 62
	746,976 78
"Surplus revenues".....	\$1,669,611 61
Deficiency	30,388 39
	\$1,700,000 00

The above surplus of \$1,669,611.61 is subject to the payment of \$557,677.00, the interest on the canal debt of 1846, leaving a balance of \$1,111,934.61 applicable to the principal of the debt.

The deficiencies in the tolls for the three last fiscal years, to meet the pledges of the constitution, article 7, section 1, amount to \$1,475,034.75. This has compelled the Commissioners of the Canal Fund to resort to deferred loans to pay the maturing principal.

The appropriation for the maintenance of the canals and the collection of the tolls, \$800,000, has not been overdrawn during the year.

The statements below show the receipts on account of the canals, and the aggregate payments for collection, superintendence and *ordinary* repairs, including the salaries of various officers connected with the canals, except the charges for engineering in enlarging and completing the public works.

	1855.	1856.
Receipts from tolls, &c.	\$2,639,792 12	\$2,749,133 40
Payments by superintendents, and to repair contractors...	\$788,681 41	\$606,932 38
Payments by Canal Commis- sioners for repairs	82,279 82	62,473 78
Payments to collectors, weigh- masters and inspectors.....	79,846 49	82,623 88
Refunding tolls, salaries, &c....	38,884 40	34,603 36
Total expenses	\$989,792 12	\$786,633 40
	1857.	1858.
Receipts from tolls, &c.	\$2,559,469 06	\$2,072,204 88
Payments to superintendents and contractors of repairs...	\$762,042 99	\$890,941 91
Payments by Canal Commis- sioners for repairs	86,104 86	55,863 27
Payments to collectors, weigh- masters and assistant collect- ors	83,046 94	88,376 06
Refunding tolls, salaries, &c....	39,258 67	43,697 67
Total expenses	\$970,453 46	\$1,078,878 91

	1859.	1860.
Receipts from tolls, &c.	\$1,812,280 80	\$2,416,588 39
Payments by superintendents, and to repair contractors...	\$629,580 51	\$378,285 89
Payments by Canal Commis- sioners for repairs	155,265 79	231,753 23
Payments to collectors and their assistants, and weigh-masters	89,583 68	96,889 04
Refunding tolls, salaries of offi- cers, &c., &c.	43,449 73	40,048 62
Total expenses for the year..	\$917,879 71	\$746,976 78

Comparing 1860 with 1859, we show a gain in tolls of \$604,-297.59, and a reduction in expenses of \$170,902.93, making the whole difference between the two years, in favor of 1860, \$784,-199.52. But the actual expenses incurred during the year, were \$20,000.75 less than is above stated, being that amount of salaries of collectors and weigh-masters, &c., for July and August, 1859, which could not be paid that year, in consequence of the failure of the appropriation. The actual sum paid to collectors, &c., for services performed during the last fiscal year, was \$76,888.29, which brings us back to 1854 in this branch of expenses, and a further reduction under this head, of \$10,000.00, may be expected the present year.

The existing laws restricting the multiplication of officers on the canals, have operated beneficially to the public service, and from the receipts of tolls during the last season of navigation, we have not much ground to believe the State has lost in revenue by dispensing with the services of forty or fifty canal officials, whose chief employment or service performed, was to attend at the collectors' offices, monthly, and make their receipts for the compensation allowed by the Canal Board.

The Auditor cannot permit this occasion to pass, without entering a serious protest against the appointment of men to offices on the canals, who do not, and will not give their personal, daily attention to the duties assigned them. The regulations of the Canal Board on this subject, are plain, direct and explicit, and yet the non-observance of them in too many instances is notorious, and invites to the perpetration of frauds upon the revenues, and losses to the State.

The clerk or deputy of an officer who gives no personal attention to the duties of his place, has nothing to fear from his principal. He soon becomes the master, performs his duties when he likes, and as it suits pleasure and convenience.

COST OF CANAL REPAIRS.

This ever recurring and never ending subject presents itself from year to year with varied aspects.

The following statement shows the cost of superintendence and ordinary repairs during the last five years, and includes sums paid by the Canal Commissioners as well as superintendents for repairs, and to repair contractors.

1856.	Cost of superintendence and repairs		\$669,406	18
1857.	do	do		817,906 26
1858.	do	do		946,805 18
1859.	do	do		784,846 30
1860.	do	do		610,039 12
Total for five years.....				<u>\$3,829,003 04</u>
Average of five years.....				<u><u>\$765,800 60</u></u>

It will be noticed the repair expenses in 1858 exceeded those of 1856, \$277,399.02, and also exceeded the expenses of 1860, \$336,766.06; differences so large as these might, unexplained, excite inquiry and remark. The large outlays in 1858, caused by the great damage to the canals by floods in 1857, and the cost of the repairs were in the main brought into the accounts of the succeeding year. Another cause was this: In 1858 all the sections of the canals, thirty-two in number, were under the charge and supervision of superintendents of repairs, except two on the Erie and ten on the lateral canals. The repairs on these twelve sections had then been under contract two years. On the 1st of October, 1860, all the superintendents' sections on the canals were under contract for repairs, at an aggregate cost to the State of \$259,372, to be paid to the contractors monthly. The rebuilding of the wooden locks on the lateral canals has been reserved out of the contracts, as well as some other costly structures, so that this charge is borne by the State in addition to the sums paid to the contractors. The extent of this charge may well be imagined by a bare statement of the facts in respect to the cost of rebuilding some of the wooden locks on the Chemung canal.

In 1857, two of the locks on that canal were rebuilt of composite material at a cost of \$31,334.34. In 1859, seven more of the locks were rebuilt of wood, at an aggregate cost of \$65,942.64 for the seven, or \$9,420.37 for each. There are forty-five locks on this canal and the feeder, which at some future period will have to be rebuilt, and if, at the average cost above given, the whole charge for rebuilding the remaining forty-five locks may be set down at \$423,916.65, an amount large enough to excite serious reflection, if it may not provoke scrutiny and examination. This canal was completed and brought into use in 1834, and it appears by the contracts on file in the Department, that when constructed the locks upon it were built at prices ranging from \$800 to \$1,500 each, without the aid of engineering in regard to quantities and classifications. By what species of engineering and financial legerdemain the cost of replacing a new wooden lock in 1859 on the foundations of the old one, could be made to exceed by more than eight hundred per cent. the expense of the original structure in 1833, is beyond the grasp of any ordinary mind. These locks have been in use twenty-seven years, and in that time have been subject to the repairs of similar structures on our canals; the top and upper timber work has no doubt decayed and given out, and needs replacing, but the foundations submerged by water, and the lower timbers, except in isolated cases, cannot be in a condition to require being taken up and replaced by new foundations and new timbers. It must be remembered that there is no law of the State authorizing these locks, or any other locks on the lateral canals to be rebuilt on an enlarged plan, or any other plan than that adopted and prescribed for their original construction, or of any other material than wood. There are 372 wood locks on the remaining lateral canals, which have been in use over twenty years, and it is supposed these will have to be rebuilt, reconstructed, or so thoroughly repaired as to be classed among the locks rebuilt.

It may be a subject of serious inquiry whether the State should be subjected to the large outlay of \$3,404,240 in rebuilding these locks, and at ten times the cost of their original construction, except upon a careful and scrutinizing examination in regard to the extent and necessity of the expenditure.

These were completed canals in 1846, their alienation is inhibited by the Constitution, and their navigation must be kept up and maintained; but this need not and should not be done by the

imposition of continued burthens upon the public. The Auditor now repeats what he has often urged and insisted upon in former reports from this Department:—The repair expenses on the canals have been extravagant; the moneys unwisely and improvidently applied, and without that regard for economy which an individual would bring into use in his own private affairs. This perhaps is not to be expected fully; we have a right, however, to look for some degree of forbearance in this respect on the part of the public agents, but hitherto have most signally failed in finding it.

The whole question has been settled by placing the ordinary repairs under contract with individuals for less than a quarter of a million of dollars a year. These contracts cover all the work necessary to be done to keep the canals in good repair and to maintain navigation, with some exceptions, which should not cost over fifty thousand dollars a year, except in cases of breaks in the banks or destruction of aqueducts or other costly structures. The same work and service has heretofore cost the State, two, three and four times that sum. We are aware that these contracts have been taken at prices below what they should have been to remunerate the contractor and enable him to comply fully and strictly with the terms of his contract, and consequently there are constant evasions, to prevent losses, and appeals for extra jobs of work. The locks have not been at all times sufficiently tended, and in seasons like the past, delays in navigation have happened. This we know is wrong, and a just complaint on the part of forwarders. The Contracting Board has no discretion under the law, but is bound to award the contract to the lowest responsible bidder who will give adequate security for its performance. The question is now presented, can we improve and extend this system of repairs and at the same time preserve the canals in good condition and keep up a satisfactory navigation? Believing this can be done, I submit a plan, (the subject perhaps more properly belongs to the Canal Commissioners,) which I believe to be feasible, and if carried out will ensure thorough and prompt reparation when and wherever needed, and accomplish every object that has hitherto been attained by the expenditure of twice the sum, than it is now proposed to pay. The attention of the Legislature was called to this subject in the last report of the Canal Commissioners. It appears to me there are grave and serious objections to letting the repairs of all the canals to one individual or company, or for a longer period than five or six years.

It is proposed to let the repairs of each division of the Erie canal, and each of the other canals, separately. That no more than one contract shall be awarded to the same individual or company; and that in lieu of, or in addition to any personal security required for the performance of the contract, each contractor shall deposit in the Treasury, not less than \$2,000 nor more than \$20,000, to be absolutely forfeited to the State in case of non-performance by the contractor.

The following statement shows the names of the canals, the length in miles of each division of the Erie canal, and of the other canals, and the number of sections and locks on each, and the prices now paid under existing contracts, and the contemplated price to be paid if the plan is carried out:

CANALS.	Miles in length.	No. of sections.	No. of locks.	Repair contracts, 1st October, 1860.	Contemplated price to be paid.
Erie canal, eastern division . . .	136	5	52	\$60,419	\$100,000
Erie canal, middle division . . .	76	3	6	15,218	35,000
Erie canal, western division . . .	155	5	20	41,167	65,000
Champlain canal and Glens Falls feeder	78	3	37	22,259	35,000
Oswego canal	38	2	18	15,699	35,000
Oneida River improvem't, Bald- winsville canal, and Seneca river towing path	38				
Cayuga and Seneca canal	23	1	11	3,574	10,000
Chemung canal and feeder	39	1	52	13,475	30,000
Crooked Lake canal	8	1	27	3,869	6,000
Chenango canal	97	3	114	22,000	40,000
Genesee Valley canal exten- sion, and Dansville side cut . .	125	3	115	26,133	46,000
Oneida Lake canal and feeder . .	7	1	7	2,375	6,000
Black River canal	49	2	109	15,984	
Black River improvement	42 $\frac{1}{2}$	1	1	3,800	30,000
	911 $\frac{1}{2}$	31	569	\$245,972	

The cost of repairing breaks on all the canals in 1858 was \$144,394.20; in 1859, \$31,003.95; and in 1860, \$15,240.39.

The prices put down in the last column of the table will appear small to those who are only familiar with canal repair expenses,

by seeing the yearly aggregates swelled to millions of dollars, and they are small compared with the sums paid in former years. But it will be noticed that the amounts are increased nearly one hundred-per cent. over the present contracts.

The enlargement of the Erie, Oswego, and Cayuga and Seneca, leaves these canals with strong firm banks, and new, or comparatively new structures, except on the eastern division of the Erie. The Champlain canal is to be deepened, its prism enlarged, and its banks raised and strengthened by the State, by expenditures outside of the present repair contracts.

The contractors, under the proposed plan, will stand in the place of the State in reference to the existing contracts, and should be entitled to all the benefits resulting from the execution of them by the present contractors; and the increased sum proposed to be paid, will be sufficient on the lateral canals to cover all the cost of rebuilding the wooden locks and other structures reserved out of the present contracts. Any extraordinary repair or improvement ordered by the Canal Board or Legislature, will, of course, be excluded from the new contracts. Being well satisfied that the plan is entirely feasible, that the propositions will be taken for the sums named, and by parties who will give any security which may be required for the performance of the contracts, I feel no reluctance in submitting this brief outline of a project which has engrossed a considerable portion of my attention for several years past. It is proper to remark, before leaving the subject, that it is deemed necessary for the Legislature to fix the maximum sum to be paid in each case, to avoid supposed constitutional difficulties.

The sum paid by the Canal Commissioners for repairs during the last year, \$231,753.23, is largely in excess of former years, as will be seen on reference to the comparative table, near the beginning of this report. The rebuilding of the Chemung canal locks, and the repair of the Tonawanda creek towing path, have largely aided to swell this amount.

The settlement of old claims, of years standing, alleged to have been contracted by former superintendents, and of every type, shade and complexion, has been pressed upon the Commissioners. The payment of these has served to increase the amount paid for repairs the last year by the Canal Commissioners. The old system became vicious by the corrupt abuses practiced under it, and the infidelity of the public agents. We are not yet rid of the fruits of it, and may not be for years. To stop this tornado of

waste a change becomes imperative, a change, if carried out in good faith, that can have no other than the most beneficial effect upon our canal expenditures.

CANAL TOLLS AND REVENUE.

The revision of the rates of toll in April last has been attended with very beneficial effects upon our canal revenues. No tonnage has been lost to the canals in consequence of putting up or partially restoring the rates of 1857, and none would have been lost to them by the entire restoration of the rates of that year, so unwisely reduced in 1858 and 1859. The increased business and tonnage of the year has, no doubt, contributed most materially to the unprecedented increase in the revenue during the late season of navigation, compared with the two preceding years. I risk nothing in saying, that if the entire rates of 1857 had been restored by the Canal Board last spring, with the revision which was then made, our tolls would have reached, if they did not exceed \$3,300,000, and this, too, without the least disturbance in the course of trade, or any diversion of it from our lines of traffic. We, of late, have been so much in the habit of hearing the canal decried and disparaged, that many of our fellow-citizens began to fear there might be some danger of a final failure, and that after all our outlays and expenditures, the interest and principal of the cost of enlargement and completion would be turned over to the tax-gatherer, while others hoped for a result that would bring them under the auctioneer's hammer to the highest bidder. The Auditor can, in justice to himself, say, that he has neither entertained those fears, nor indulged in any such hopes. He has never doubted, nor does he now, that these stupendous works of a great and noble State, projected forty-three years ago, by pure and patriotic minds, and carried forward to completion under trials and surrounded by difficulties inherent to our form of government, will ultimately redeem every pledge made in their behalf. But to do this they must be protected against aggressive legislation, shielded from pernicious competition, and a corrupt and wasteful administration of their affairs. Rates of toll, too, must be adjusted and imposed with a strict regard to revenue. These revenues are mortgaged for the payment of the debt contracted for their construction, enlargement and completion. We invited the capitalist to lend us his money upon this constitutional pledge, saying to him, you shall have all the income, save what is needful to pay the expenses of collecting the tolls, the superin-

tendence and the *ordinary* repairs of the works, to pay your interest, and reimburse your principal when it becomes due. Honesty and good faith requires of us that we hold the rates of toll to the "largest revenue standard." If we do otherwise, we inflict a great and cruel wrong upon the tax-paying portion of our people, violate the spirit and meaning of the fundamental law of the State, and destroy the security pledged to the public creditor. This we have done by unnecessary reduction in the rates of toll below a revenue standard, creating and inviting, under the semblance of legislative authority, corporate competition with the canals, and under the pretence of fostering trade, granted away the income pledged to the payment of the public debt.

The experience of the late season of navigation shows most conclusively that the Canal Board acted wisely and well in raising and adjusting the rates of toll last spring; and the same experience also shows what will probably be remedied by the next adjustment, that a higher rate on articles yet untouched will secure a large increase of revenue. Previous to bringing into use the enlarged channels of the Erie, Oswego and Cayuga and Seneca canals, boats were restricted on those canals to three feet and six inches draft of water. During the year 1860, boats on these waters have been allowed to draw five feet, which is an addition of eighteen inches to the original draft, and as the larger class of boats will carry four tons to the inch of increased draft, it follows that every boat of this description will carry seventy-two tons more with a five foot draft, than it would upon a three and a half foot draft. By this process the expense of transportation is cheapened to the carrier, as the cost of towage and manning a boat with 180 or 190 tons of cargo, is no more than one of 120 or 130 tons. With a water channel seven feet by seventy, from Lakes Erie and Ontario to tide water, we have cheapened transportation nearly one-half to the carrier, and yet our rates of toll have been reduced in some cases 33, 50 and 75 per cent. on the rates of 1852, and this too on the leading articles of transit. We were told, and the public were assured, that any rate of toll could be charged when the enlargements were completed, that might be found necessary to pay off all the indebtedness of the State which then existed, or might be contracted for their completion. We shall, at the opening of navigation next spring, cheapen navigation to the carrier equal to 45 per cent. in the reduction of the rates, and yet we find a strong resistance to an increase equal to 25 and

33 per cent. on former rates. We know the difficulties of restoring or reclaiming public revenues that have been yielded or given up. In this case the contest is between the carrier and the forwarder, who use the canals, and the taxpayer, who bears the public burthens. Unlike most controversies, the victory has been achieved by the few over the many, thus far.

TOLL RECEIPTS SHOW THE COURSE OF TRADE.

The following statement, showing the whole amount of tolls received on all the canals of the State during the late season of navigation, from their opening to the 1st day of December, 1860, and the amounts received at some of the most important collectors' offices, presents striking illustrations of the direction of trade, comparing the tolls of 1859, collected up to December 1st, with those of 1860, we shall not fail to see that a large increase in revenue has been drawn from the traffic going through the State to market from the western States and Canada:

1860, December 1st. Whole amount of tolls collected to date	\$3,005,362
1859, December 1st. Whole amount of tolls collected to date	1,714,560
Increase in 1860	<u><u>\$1,290,802</u></u>
Whole amount of tolls collected at the Buffalo office from the opening to December 1st, 1860	\$1,137,225
Whole amount of tolls collected at the Buffalo office from the opening to December 1st, 1859	552,432
Increase in 1860	<u><u>\$584,793</u></u>
Whole amount of tolls received at the Oswego and Phoenix offices during the same periods in 1860...	\$540,747
Whole amount of tolls received at the Oswego and Phoenix offices during the same period in 1859...	249,933
Increase in 1860	<u><u>\$290,814</u></u>

Increase in 1860	<u><u>\$136,920</u></u>

Whole amount of tolls collected on the Champlain canal in 1860.....	\$124,529
Whole amount of tolls collected on the Champlain canal in 1859.....	106,349
Increase 1860.....	<u>\$18,180</u>

The number of tons shipped at the Buffalo, Oswego, and Phoenix offices in 1859, was 1,137,430, on which was paid \$804,365 of tolls. The tonnage at these offices has probably increased in proportion to the increase of tolls, and, if so, these offices have cleared the present season more than 2,250,000 tons.

The tonnage and total movement of the last season will exceed that of any other year since the canals have been in operation, and this fact will present a basis for estimates of future receipts, only to be disturbed by violent civil convulsions, reactions in trade, stimulated by short crops and financial derangements. It may be safely asserted that any rate of tolls, imposed since 1847 by the Canal Board, might have been collected on the down traffic last season without any loss of tonnage, and that we might have increased our receipts to three and a half million dollars on our canal traffic.

From the information now before us, we are enabled to deduce the following facts, which will be fully established by the annual toll and tonnage report, to be made from the Department in January next:

1st. That three-fifths of all the tolls collected the last season of navigation, were received on through freight, from and to the Western lakes and Canada.

2d. That of the \$1,290,802, increased receipts over 1859, \$1,012,527 were collected at Buffalo, Oswego, Phoenix, and the three tide-water offices.

3d. That of the above increased receipts, only \$288,275 were collected at all the other collectors' offices in the State, which indicates a strong competition on the lines of way traffic.

ESTIMATES FOR THE FISCAL YEAR.

If the tonnage movement on the canals in 1861 shall correspond with that of the past season, we may safely estimate a considerable increase in revenue the present fiscal year ending on the 30th of September next, over the past, by a further adjustment and further increase in rates on some of the leading articles.

The toll receipts the present fiscal year, from the 1st of September to the 1st of December, 1860, were.. \$1,441,465

By adding ten per cent. to the spring and summer receipts of the last season, say from the opening of navigation to the 31st of August, 1860, we have estimated receipts for the remainder of this fiscal year of..... \$1,720,286

Total estimated gross receipts..... \$3,161,751

Deduct appropriation for collection, superintendence, and ordinary repairs..... 800,000

Net surplus to the sinking funds..... \$2,361,751

This surplus, if obtained, will pay all the constitutional charges upon the canal revenues, under sections 1 and 2 of article 7, and leave a balance of \$311,751 under section 3 of the same article, to pay the interest on the enlargement and completion debt of \$12,000,000.

By this exhibit and estimate, we are presented with the following deficits, to be provided for partly by direct taxation and partly by postponements and future deficiency loans:

1st. A deficit the present fiscal year to pay the interest on the \$12,000,000 loan, of.....	\$287,884 15
2nd. A deficit the next fiscal year to pay the interest on the same loan, of.....	398,249 00
3rd. A deficit to reimburse the principal of the same loan in eighteen years, of.....	406,242 64
4th. A deficit in the appropriation for the support of government, of.....	200,000 00
5th. A deficit in the sum required to pay the interest and redeem the principal in eighteen years, of the \$2,500,000 floating debt loan, contracted under the act chapter 271, Laws of 1859, of	288,888 88

Aggregate of deficiencies..... \$1,581,264 67

Deficit number two, \$406,242.64, can, and probably will be postponed until 1871, when the first instalment of the debt falls due, and then will be made up by deficiency loans, extending the

[Assembly, No. 5.]

payment of the debt to a future day, and necessitating for a long period, the annual levy of canal tolls or taxes upon the people to preserve the integrity and protect the honor of the State.

At the close of the last fiscal year the deficiencies in the tolls to pay the constitutional charges upon the canal revenues, were \$1,985,519.91, and \$1,548,889.88 of those deficiencies are now being raised by direct taxation upon the people of this State. How long must this condition of things last, and how long will the people bear these burthens? The amount of tolls collected on the canals is unfixed, and the revenues are uncertain. They are dependent

1st. Upon the business done, and

2d. Upon the rates of toll imposed.

The business and the rates have been and will continue to be controlled and governed by the railway competition of our own State. When the price of transportation on the canals, received by the carrier, whether influenced by competition or any otherwise, is less than it costs him to do the work, he asks for a reduction in the rates, or he retires, from inability to carry on the contest. Our future prospects on the question of revenue, are contingent. The State is impotent of all power, except to impose burthens upon its citizens, in the shape of taxes. We are in the condition of a government that has granted away the right of importing and exporting goods, free of any charges, to a corporation or individuals, and should then turn round and attempt to collect duties and imports for its support, with this difference, we have the right, and it is our duty to reclaim what our predecessors have attempted to give away.

RAILWAY COMPETITION.

The recent report of the New York Central railroad shows a large increase in tonnage and mileage, and a considerable increase in freight receipts over 1858 and 1859; a large reduction in rates from 1857, and a considerable reduction from the rates of 1858 and 1859. The Auditor has no information in respect to the operations of any other lines of road competing with the canals during the last year.

	Tons moved one mile.	Freight received.	Average per ton one mile.
N. Y. C. Railroad, 1857..	145,873,791	\$4,559,276	3.13 cents.
do 1858..	142,691,178	3,700,270	2.59 do
do 1859..	157,136,000	3,337,148	2.13 do
do 1860..	199,231,392	4,095,933	2.05 do

The report shows the increase in tons carried, over 1859, to be 193,864 : of tons moved one mile 42,095,392 : in receipts on freight \$758,785, and decrease in rates from an average of 1858 and 1859 of 3 mills a ton per mile, which is nearly equal to the average of the toll rates on the canal—clearly evincing a strong disposition on the part of that company to continue its active and sharp competition with the canals for the freight traffic on the line.

The freighting on the road during the year covered by this report, would, at the rates charged in 1857, have brought to the company \$6,235,942.56 of receipts, instead of \$4,095,933.53.

These comparative statements are made with a view solely of showing that this company holds the position and has the ability to respond to any rate of toll which has ever been imposed on the canals since 1853, and give to its shareholders a dividend quite as liberal as any that has been made since 1857. The reduction in 1860 from the average of 1858 and 1859, is equal to a loss of \$597,694.17 on the tonnage of the last year. During some portions of the late season of navigation, canal freights from Buffalo to New York have been as high as \$8.33 per ton, and pro-rata if not higher rates have been paid from Oswego, Rochester and other places on the lines.

The committee of stockholders notice the "almost invariable reduction in prices" on the freight traffic, but seem to think the amount varies "from year to year according to circumstances beyond the control of the company." Now it so happens that the freight business has increased every year since the consolidation except one, while the receipts have fallen off by a reduction in prices on an increasing tonnage since 1857. But why beyond the control of the company when canal freights are higher than rail freights?

The Auditor has nothing to do with the motives which governed the getting up of this report; there are one or two facts however that should not be passed over without being noticed. In 1860, the cost of operating the road is stated to be $61\frac{49}{100}$ per cent. of the gross earnings, while in 1859, the like charge is stated at 54.03 per cent. Why this difference of $7\frac{46}{100}$ per cent., equal to \$305,556.60 of the gross earnings on freight?

It was understood early in the last season that the competition between this road and the canals was to cease for the present at any rate. Such representations were made, but whether by

authority or not the Auditor is not able to state. We now see how far and to what extent such promises have been kept, if they were made, and we have had too much experience already not to know very well how fatally this reduction in prices on the part of the company, would have affected the tolls on the canals in almost any other season than the past when more freights were offered at high prices of transportation than could be carried.

Under the circumstances before detailed the question is raised, does the State possess the power of graduating and fixing the rates of tolls upon the canals for the purposes of revenue, or is this power indirectly but effectually exerted by corporations holding franchises granted by the State? We have seen heretofore and now see that, in this respect, the sovereignty of the State is controlled and limited in its action by railway corporations. This competition and reduction in freight prices, if not injurious to the interests of the shareholders of the roads is by no means advantageous to the State in regard to its revenue.

The way freight carried was sixty per cent. of the total movement, and paid only two-fifths of the whole receipts, showing the value of the through traffic to be as three to two over the way.

The net earnings of the road the last year as shown by the passenger and freight receipts, and from other sources, are \$2,678,400.20.

Of the increased tonnage in 1860 over 1859, 193,864 tons; the increase on way freight was 129,417, and on the through, 64,147 tons. Comparing the two years, it appears the reduction in 1860 on way freight has been 30 cents a ton, average.

FRAUDS ON THE REVENUE.

These have not been entirely prevented, but, to a considerable extent, counteracted and defeated, by the vigilance of the canal officers, who, in all instances of detection, have collected heavy penalties from those who were found violating the laws.

The customary efforts were made, at the opening of navigation, to procure, at some of the western weigh-locks, untrue weight of cargoes of lumber, paying toll by measure. The object, in these cases, is not to cheat the State out of tolls, but to obtain pay from the consignee for carrying more tons than was on the boat, by making the weigh-master the instrument of the fraud. Although there may have been instances of success in applications of this sort, during the last season, the Auditor is satisfied the practice has been far less prevalent than formerly. The most

serious losses sustained by the revenue, arise from clearing cargoes for less than the quantity on board, where the same cannot be brought to the weigh-lock test. This is the fault of the collector, who should not clear without a "just and true" bill of lading, and not then, even, unless he is satisfied, by inspection or upon other proof, that the cargo is not under estimated.

Too many of the collectors consider they have done their whole duty when they give a clearance for just what the master tells them he has got on his boat, and take whatever tolls are handed to them, without any inspection or further inquiry into the matter. In fact, the extent of the duty performed by such officials, is merely to take whatever money is offered to them by the shipper or boat captain, make out an illegible and unreadable paper called a clearance, receipt the tolls upon it and hand it over to the master, and the important duty is done.

Instances have not unfrequently occurred where property has been cleared by a wrong name to avoid paying the rate of toll that must be charged upon it if cleared by the right name, and this when the revenues have suffered pretty severely by such fraudulent tricks. This could not happen where the collector, as is his duty, informed himself by inspection, of the contents of the cargo, without subjecting him to the charge of gross corruption. The official excuses himself of criminal duplicity, by avowing a neglect of duty.

To follow out and describe the numerous tricks and contrivances practiced to cheat and defraud the State out of tolls, would be almost an endless task. One, however, may be mentioned, and perhaps, should be, in consequence of the serious effect it has had, and will have, upon the revenues. Several instances have happened during the past summer, where boats have been weighed light twice within two or three months, and invariably, upon the second weighing, the light weight would be increased two or three tons. When written to on the subject, the weigh-masters have not seemed to have noticed any particular change in the form or structure of the boats. A few isolated cases would not make much difference, but when applied to several hundred boats, the State would lose the tolls on thousands of tons of freight during the season.

Clearing cargoes estimated on board, when the toll is paid by count, or the foot, is almost invariably attended by losses to the State, especially when the cargoes are discharged along the Hudson river, or in the vicinity of New York.

The Auditor knows of no better correction of these abuses, than the selection and appointment of faithful and competent officials, who would give their daily personal attention to their duties.

CHARGES UPON THE CANAL TOLLS.

The seventh article of the Constitution charges the payment of the following sums upon the annual canal revenues, after defraying the expenses of superintendence, collection and *ordinary* repairs:

To the Sinking Fund under section <i>one</i> of said article, to pay the interest and reimburse the principal of the canal debt as it existed on the 1st day of June, 1846,	\$1,700,000 00
To the Sinking Fund under section <i>two</i> , to pay the interest on the General Fund debt,	350,000 00
To the Sinking Fund under section <i>three</i> , to pay the interest on the canal debt of \$12,000,000, contracted to enlarge and complete the public works,	710,000 00
For the annual contribution to the Sinking Fund to redeem the principal of that debt in eighteen years,	406,242 65
For the contribution to support government,	200,000 00
To pay the interest on the floating debt loan of \$2,500,000, contracted under the act, chapter 271, Laws of 1859,	150,000 00
For the annual contribution to the Sinking Fund created by that act to reimburse the principal of that loan in eighteen years,	138,888 88
	\$3,655,131 53

The net canal revenue set apart each year to cover all the constitutional claims upon them, and those enjoined by the act of 1859, must be *three millions six hundred and fifty-five thousand one hundred and thirty-one dollars and fifty-three cents*. Estimating the cost of superintendence, collection and repairs at \$700,000 a year, we must have a gross revenue per annum of \$4,355,131.53 to satisfy these constitutional requisitions.

The above sums must be set apart in the order of priority above stated. With a net annual surplus of \$2,760,000, and an estimated gross revenue of \$3,460,000, we can pay the interest on the Canal and General Fund debt, and reimburse the principal of

the canal debt of 1846 as it falls due. But the interest and principal of the floating debt loan will have to be met as provided in the act creating it, by direct taxation of about one-fifth of a mill on present valuations. It should be noticed that, with no larger net surplus than is above stated, the yearly deficiencies chargeable upon the canal tolls will be \$895,131.53. These deficiencies will have no other effect than to postpone the payment of the present public debt of the State beyond the periods now limited for liquidation, and prolong a direct taxation of \$500,000 a year until the canal debt of 1846 is paid, or a sufficient sum "shall have been appropriated and set apart to pay the interest and extinguish the entire principal" of that debt.

CANAL STOCK DEBT, 30TH SEPTEMBER, 1860.

	Principal.	Annual interest.
Under article 7, section 1, of the Constitution	\$10,721,998 99	\$557,677 00

			<u><u>\$257,191 59</u></u>

The Auditor, in another part of this report, has stated the present and prospective deficiencies to pay the interest on the \$12,000,000 debt, contracted under the above section.

Amount required for one year's interest on the debt \$710,000 00

Balance in the Treasury, September

30, 1860

\$155,115 85

Estimated receipts from the proceeds
of the 1½ mill tax, after paying the
temporary loan of \$1,200,000, and
interest thereon

267,000 00

422,115 85

Leaving a deficiency for the current fiscal year of.. \$287,884 15

The above balance of \$102,075.74, invested for the redemption of the principal of the debt, cannot be applied to the accruing interest.

Of the above debt, \$1,200,000 was contracted to pay interest, and will be reimbursed on the 1st of January, 1862, from the proceeds of taxes now being collected.

Sinking Fund for the redemption of the canal debt of \$2,500,000, (under article 7, section 12, of the Constitution.)

Received, viz:

Transferred from the fund for payment of the Floating Debt loan,
(to be reimbursed),

\$187,500 00

Paid, viz:

Interest on loans for payment of the

Floating Debt,	\$112,500 00	
Balance on hand September 30, 1860, ..	75,000 00	
		<u>187,500 00</u>

When the tax directed to be levied and collected by the 4th section of the act, chapter 271, Laws of 1859, under which the Floating Debt Loan of \$2,500,000 was contracted, shall be collected and paid into the treasury, the above sum will be reimbursed, and applied in payment of the claims against the State, specifically enumerated in the 2d section of the said act, which are not otherwise provided for.

This course was adopted to meet the accruing interest on the loan, because there were no other means in the treasury to pay the interest, and the act directed this to be done.

WHEN WILL THE CANAL DEBT OF 1846 BE PAID?

This question cannot be answered with any certainty so long as its solution depends upon the fluctuation of canal tolls. These are contingencies against which no human foresight can guard, although it cannot be denied that much may be done by legislation to promote and foster this great State interest.

The whole of the Canal Stock debt of 1846, falls due between this time and the 1st of July, 1865, except \$1,500,000 reimbursable on the 1st of October, 1868, and \$4,000,000 payable on the 1st day of January, 1874. Both of these were deficiency loans made on the credit of the Sinking Fund, under section 1, of article 7, of the Constitution. The policy of making an eighteen years deficiency loan on the credit of this fund, is not perceived, especially when we know that the accumulations of the fund, if it performed its office, would have been sufficient to pay off the whole debt in 1865.

By a carefully prepared table, Document No. 93, it appears that with the annual payment into the Sinking Fund of \$1,700,000, and the investment of the surplus of the fund, when not wanted to reimburse principal, the accumulations of the fund will be sufficient to pay all the principal and interest of the debt as it falls due, and leave a surplus on the 1st of October, 1865, of \$3,236,558.26 applicable to the payment of the debt maturing in 1868 and 1874. On this hypothesis it may be assumed that the surplus of the fund on the 1st day of April, 1867, will cover the

principal of the debt falling due after that time. And then, but not before, can any portion of the canal revenues be applied to the principal of the General Fund debt. At this time, should it ever come, surrounded with the facts and circumstances here assumed, an important and interesting question may be presented: whether we must continue our contributions to this Sinking Fund until we "appropriate and set apart" a sum sufficient to pay the interest as well as the principal of the debt, or whether we may not invest and apply the interest on the investment in payment of interest on the debt? These remarks may be deemed speculative rather than practical. But in view of the question as to the ultimate redemption of the General Fund debt, when the canal tolls can be applied entirely to the payment of the interest and redemption of the principal of the \$12,000,000 enlargement and completion debt, the subject is one of grave importance. If we follow in the footsteps of a policy heretofore inaugurated, and hitherto pursued, of allowing our canal revenues to be wasted and squandered, our tolls to be diverted and run down far below the sums required to be set apart for the constitutional Sinking Funds, we must abandon even the remotest hope or expectation of being relieved from a burthensome public debt, and from an annual taxation inexorably crushing down labor and industry, and depleting capital to an extent hitherto unknown and unexampled in the State or country for amount and duration.

The Auditor does not propose to examine at what period the principal of the General Fund debt can or will be paid by the canal tolls. That subject appropriately belongs to another officer and department of the government.

After the liquidation of the canal debt of 1846, the sums thereafter required to be "appropriated and set apart" to reimburse the principal of the General Fund debt, and pay the interest on the twelve millions enlargement debt, contracted under section 3, will amount to \$2,210,000 annually. This will involve the necessity of imposing rates of toll to raise \$3,000,000 a year of gross revenue until the General Fund debt is paid, estimating the annual expenses of repairs and collection at \$800,000. This no doubt will extend over a period of five or six years. The Constitution of 1846, wisely and providently provided for the extinguishment of the then existing canal debt from the canal revenues, by 1865, and the Sinking Fund set apart would have accomplished that object if the State had not been despoiled of its revenues.

UNPAID CLAIMS AGAINST THE STATE.

The outstanding and unpaid claims due to individuals on the 30th September, 1860, as appears by the books of the Department, amounted to \$580,653.84, and may be classified as follows :

For drafts and certificates made by the Canal Commissioners, other than land damages, made prior to September 30, 1860, and unpaid on that day..	\$35,459 10
For land damages on awards made by the Canal Appraisers prior to December 31st, 1858.....	25,643 35
For land damages, on awards made by the Appraisers on the 31st of December, 1858.....	111,781 94
For land damages, on awards made by the said Appraisers from January 1, 1859, to April 13, 1859, inclusive	59,555 21
For land damages, on awards of the Appraisers from April 13, 1859, to September 30, 1860 inclusive..	307,187 17
For interest due to contractors, and on awards, under the act chapter 263, of the Laws of 1858, which had accrued on drafts and awards paid prior to the passage of the act.....	17,678 94
For unpaid awards made by the Canal Board and Board of Canal Commissioners, under special acts	23,348 13
	\$580,653 84

There has been reserved from the principal and premiums of the \$2,500,000, Floating Debt Loan, the sum of \$187,500, to pay the accruing five quarters' interest on the loan, until the tax to be levied under the act the present year, should be collected and paid into the treasury. When the above sum is reimbursed by this tax, it will be applicable to the payment of the first three of the above items of indebtedness, and to a small portion of the fourth, and the balance, \$393,153.84, is provided for in the half mill taxes directed to be levied and collected for canal purposes in 1860 and 1861. There are other claims against the State on account of the enlargement and completion of the canals, not embraced in the foregoing; the precise nature and extent of them are not known at the Department. The claims of contractors to the fifteen per cent. reserved in their contracts, and payable on the completion of the work, miscellaneous expenses chargeable to the enlargement funds, and further awards by the Canal Appraisers for lands

taken for the public use, and awards to claimants by the Canal Board, under special acts of the Legislature, embrace the principal items of the unascertained claims, and will no doubt, in the aggregate, amount to a very large sum.

Six hundred thousand dollars of the half mill tax of the present year has been already anticipated, and directed to be applied to the completion of the public works under contract, so as to secure seven feet of water next spring on the Erie, Oswego and Cayuga and Seneca canals. It was expected that the two half-mill taxes, directed to be levied and collected by the act, chapter 213, of the Laws of 1860, would have placed funds in the treasury sufficient to enable the Department to pay off all the claims against the State on account of the enlargement and completion of the public works, including land damages. In this expectation we shall probably be disappointed.

Upon the completion of the contracts for the enlargement, the fifteen per cent. reserved will probably exceed \$160,000, to which the contractors will be entitled when the work is done. Such are the terms of the contracts, and the expectation that these payments will be deferred creates embarrassments, and causes applications to the Canal Board for the cancellation of the contracts by the contractors, and when granted, the work must be again relet, producing delays and procrastinations very injurious to the public interests.

INTEREST ON CLAIMS AGAINST THE STATE.

By several legislative acts the State is chargeable with interest on all claims growing out of the enlargement and completion of the public works. These embrace sums due the contractors on their contracts for work and materials, awards made by the Canal Appraisers for lands taken for the use of the State, and awards made by the Canal Board and Board of Canal Commissioners. The extent and amount of these claims, for interest, have not yet been ascertained and cannot be until finally paid. The interest on the registered drafts, paid from the proceeds of the floating debt loan, which accrued between the 1st of July and the 26th of December, 1859, will amount to \$60,000. The interest on the remaining claims will, before the principal is liquidated, amount to \$30,000 more. The Auditor has notified parties having claims for interest to file them in the Department, under the expectation of being able, in this way, to ascertain the amount claimed and due.

COST OF THE CANALS.

Erroneous statements have been made, through the medium of public documents, in relation to the "amount expended upon and required for canal purposes, since the adoption of the amendment of the Constitution, in 1854." This error consists more in the manner of classifying and arranging the sums raised and applied for canal purposes, than a departure from the whole aggregate of cost, including interest. When the amended third section of the 7th article was projected in 1853, the estimated cost of completion, in addition to the \$1,500,000, raised and applied under the canal revenue certificate law, was \$9,000,000. The canal revenue certificate debt must be either excluded from or included in the cost of completion. The Auditor adopts the latter course, and thus fixes the estimated cost, in 1854, of enlarging and completing the canals, as determined by the amended third section, at \$10,500,000, and states the amount as follows:

Borrowed under the amendment, to complete the public works and pay off the canal revenue certificates....	\$10,500,000 00
Applied from premiums on loans.....	1,482,192 67
Received from tax of 1857, and applied to construction	1,406,067 56
Received from tax of 1859, and applied to construction	707,613 33
Floating debt loan.	2,500,000 00
To be received on the taxes of 1860, and applied to complete.....	1,400,000 00
Received from temporary loan.....	200,000 00
Total amount of cost to enlarge and complete	<u>\$18,193,873 66</u>

Sums raised and applied to pay interest:

Borrowed prior to 1858, to pay interest.....	\$1,500,000 00
Received from the tax of 1858, to pay interest..	680,000 00
Received and to be received from the tax of 1860, to pay interest on the debt estimated.....	\$1,575,000 00
	<u>\$3,755,000 00</u>

We see by the foregoing exhibit, that the cost to complete is double the estimate fixed in 1854, and this alone ought to admonish us against placing confidence in estimates.

TRUST FUNDS IN KEEPING OF THE AUDITOR.

Under the provisions of the act chap. 105 of the Laws of 1857, "to enlarge the powers and define the duties of the Contracting Board," that board made a regulation, in letting canal repairs by contract, requiring all persons offering proposals or bids for such repairs, to accompany the same with a certificate of deposit in any bank of good standing in this State, for the sum of two thousand dollars, to the credit of the Auditor of the Canal Department, and requiring the return of the certificates to the unsuccessful bidders or parties to whom no contracts were awarded. These deposits are held by the Auditor as security for the performance of the repair contracts, in addition to the personal security held by the State in the form of a bond given by the contractor, with two or more sureties. In case of non-performance on the part of a contractor, the deposit is forfeited to the State, and will be paid into the treasury as a part of the Canal Fund; but, if the contract is performed, the deposit must be returned at the expiration of it.

The Auditor now holds twenty-eight thousand dollars, which have been deposited by him as Auditor of the Canal Department in different banks of the State in good standing, at five per cent. interest, and in trust for the use of the people of the State and the party making the original deposit. Care has been taken in making each deposit separate, to be able, without any mistake and with perfect certainty, to trace the funds and prove their identity.

Should the present laws remain in force, and the regulation of the Contracting Board be continued, this trust fund will be considerably increased in a few years. It now becomes a matter of importance whether this trust fund should be held and invested in this mode. It cannot be paid into the treasury without a law permitting it to be done, and should not, without legal authority to withdraw and pay it over to the contractor whenever he may be entitled to it, according to the conditions of the repair contract, and the terms of the deposit.

The State cannot receive these moneys into the Treasury and engage to return them with a stipulated interest at a day certain or at an indefinite time. This would be contracting a debt. But the Auditor believes these moneys may be paid into, and held by, the Treasury under the proper designation of it as a trust fund, and authority conferred by law upon the Commissioners of the

Canal Fund to invest it under such regulations as the board might adopt or the Legislature impose. Some of these deposits, according to the terms of the repair contracts, must be held for five years, and others for shorter periods, and the interest, whether at four or five per cent. per annum, the usual rate paid to the State for its deposits, will be somewhat important to the parties concerned.

CLERKS IN THE DEPARTMENT.

Document No. 83 contains the names of the several clerks employed in the Department during the past year, the sums paid to each, and the time each clerk was employed the past year.

The appropriation for extra clerk hire in the Department, expired on the first day of January, 1859, and the Auditor has retained but seven clerks in the office since that time, including the acting Auditor. The labor has been incessant and arduous, and cannot be otherwise, where the current business of the office is kept up and promptly dispatched.

The compensation of the clerks is below that paid in some of the other offices, while the service performed is all that should be required or expected. The Auditor thinks it no more than right to increase the compensation at present allowed to the clerks, by an additional permanent appropriation, to be made by the Legislature. The compensation should be fixed, certain and permanent, and ought to be sufficient to secure faithful and intelligent clerks, whose salaries will be an object sufficient to secure the service required of them. The amount appropriated is \$7,200 a year.

ESTIMATES FOR THE CURRENT AND NEXT FISCAL YEARS.

The following sums will be required for the next fiscal year, commencing on the first day of October, 1861, for the purposes stated below, and to supply the deficiencies of the present fiscal year—all of which relate to the maintenance of the canals, and the permanent canal debt of the State :

To pay the expenses of the collection of tolls, superintendence, and ordinary repairs of the canals	\$800,000 00
For the Sinking Fund, under sec. 1, article 7....	1,700,000 00
To pay the interest on the General Fund debt, sec. 2, article 7.....	350,000 00
Carried forward	\$

Brought forward.....	\$
To pay the interest on the enlargement debt of \$12,000,000, contracted under sec. 3, article 7...	710,000 00
To pay the interest on the \$200,000 temporary loan	10,000 00
To supply the deficiency in the Sinking Fund— under sec. 3, article 7—the present year, to pay the interest on the \$12,000,000 loan.....	287,884 15
To pay the interest and contribution for sinking fund, to pay the principal in eighteen years of the \$2,500,000 floating debt loan, contracted under the act chapter 271, Laws of 1859	288,888 88
Total estimates for the year.....	<u>\$4,146,773 03</u>

ESTIMATED RECEIPTS APPLICABLE TO THE ABOVE.

Receipts from canal tolls.....	\$3,161,751 00
Receipts from taxes, under the act chapter 271, Laws of 1859.....	288,888 88
	<u>\$3,450,639 88</u>
Deficiency	<u>\$696,133 15</u>

CONCLUSION.

The reactionary movement of business on our canals during the last season of navigation, and the consequent improved condition of our canal finances, unexpected to many, but confidently looked for and anticipated by others, must be gratifying to the people of the whole State, and satisfactory to those who have labored honestly and faithfully, "in and out of season," to bring about these successful results.

We have now tested the value of former speculative theories, and untried experiments, and proved them an utter failure. As guides to direct us to successful financial results, we have found them unsafe and wholly unreliable. These facts are now apparent to you, and are as demonstrative of the unwise proceedings of the past, and of what our future policy should be, as can be asked for. The clamor about the diversion of trade from our State and commercial capital, for it was never anything but clamor, raised by interested parties to promote private interests,

[Assembly, No. 5.]

3

has been exploded and swept away. In the calm and repose of peace, our prosperity and success have produced a commercial panic, changed the balance of trade in favor of our own country, and we have barely escaped a fatal financial explosion in consequence of it. Our supply for the season has temporarily exceeded the immediate demand for export and home consumption, and panic hoarded the means to hold until we could realize the effect a returning current of specie would have upon our market.

Production and consumption of marketable products and material, which constitute the great elements of trade, are not more likely now, or prospectively, to cease than heretofore, and they will seek, as hitherto, the cheapest lines of transit. One of those lines is owned by the State, and the others lie within her borders, subject to its legal control. The power to levy rates of toll on property passing on our canals, is vested by the Constitution in the Canal Board, and nowhere else. The full exertion of this power for the purpose of producing the greatest amount, or the desirable amount, of revenue from the canals, we have seen and shall hereafter find has been and will be restrained and limited by a home competition, sufficiently potent to override and break down the safeguards of the Constitution, and compel the annual imposition of taxes for the benefit of the carrying trade through the State.

Does not the State fail in its duty to its own citizens and its public creditors when it neglects to collect a revenue from the canals, commensurate with the requirements of the constitutional Sinking Funds, chargeable with the payment of the interest and liquidation of the principal of the State debt? We know what have been the pledges to the public, often repeated and reiterated, and we know the extent, but do not heed the guarantees to the public creditors.

Although we have accomplished much during the last season of navigation in resuscitating our canal finances, more remains to be done, if it can be. Upon a traffic and tonnage equal to that of 1860, we can realize from tolls a gross revenue of \$4,000,000, and leave a fair profit to carrier, provided we are not obstructed or hindered by the competition of other lines of transit in the State, from the western lakes to tide water.

Our water lines from lakes Erie, Ontario, and Seneca, are to be opened in the spring to their full enlarged capacity of seven feet by seventy, and will, to some extent, be furnished with boats car-

rying two hundred tons, or seven thousand bushels of wheat. It is believed a further adjustment in the rates of toll, with a view to an increased revenue may be made, with perfect safety to all the interests concerned; the extent of that adjustment, however, will depend upon the conditions and prospects of trade during the coming season.

The Auditor, in submitting these remarks, has followed what he believes to be sound and correct views of the whole subject relating to our canal finances. We have high obligations and imperious duties, as a State, to perform, and, let come what may, we cannot avoid them.

Respectfully submitted.

N. S. BENTON, *Auditor*.

DOCUMENTS

ACCOMPANYING THE REPORT OF THE AUDITOR.

(No. 1.)

There was on deposit in sundry banks, to the credit of the Treasurer of the State, on account of the Canal Fund, on the 30th Sept., 1859, (see page 65 of the last report,)

1874	2,250,000 00	4,500,000 00	6,750,000 00
1875	500,000 00	-----	500,000 00
1877	900,000 00	-----	900,000 00
Debt paying in- terest.....	\$17,107,706 76	\$9,956,877 72	\$27,064,584 48
Debt not paying interest	42,737 00	-----	42,737 00
Total debt...	\$17,150,443 76	\$9,956,877 72	\$27,107,321 48
Annual interest	\$1,026,462 40	\$497,843 88	\$1,524,306 28

AN ANALYSIS OF THE FOREGOING TABLE.

Principal of debt, and sections of article 7 of the Constitution.		Annual interest of the debt.	
Section 1, 6's ..	\$2,157,706 76	\$129,462 40	
5's ..	8,564,292 23	428,214 60	\$557,677 00
Section 3, 6's ..	12,200,000 00	\$732,000 00	
5's ..	1,000,000 00	50,000 00	782,000 00
Section 10, 6's..	250,000 00	\$15,000 00	
5's..	392,585 49	19,629 28	34,629 28
Section 12, 6's..	2,500,000 00	-----	150,000 00
	<u>\$27,064,584 48</u>		<u>\$1,524,306 28</u>

The interest on the debt is a fraction over $5\frac{1}{2}$ per cent.

Of the above debt paying interest, there was held on the 30th September, 1860—

On the United States account.....	\$24,566,522 73
On foreign account.....	2,498,061 75
	<u>\$27,064,584 48</u>

(No. 67.)

Statement showing the balance on hand on the 30th September, 1860, how deposited and invested, together with the names of the accounts to which it belongs.
